Information Systems Operations, Maintenance and Support

Roy Vincent L. Canseco (c) 2020 Manila

Revision 0.1

06.2020

Table of Contents

.....	vii
1. Executive Summary	1
2. Information Systems Operations	3
2.1. Management of I.S. Operations	4
2.1.1. Control Functions	4
2.2. I.T. Service Management	4
2.2.1. Service Level	4
2.3. Infrastructure Operations	4
2.3.1. Scheduling	4
2.3.2. Job Scheduling Software	4
2.4. Monitoring Use of Resources	4
2.4.1. Process of Incident Handling	4
2.4.2. Problem Management	4
2.4.3. Detection, Documentation, Control, Resolution, and Reporting of Abnormal Conditions	4
2.5. Support/ Help Desk	4
2.6. Change Management Process	4
2.7. Release Management	4
2.8. Quality Assurance	4
2.9. Information Security Management	4
2.10. Media Sanitation	4
3. Information Systems Hardware	5
3.1. Computer Hardware Components and Architectures	6
3.1.1. Processing Components	6
3.1.2. Input/ Output Components	6
3.1.3. Types of Computers	6
3.1.4. Common Enterprise Back-end Devices	6
3.1.5. Universal Serial Bus	6
3.1.6. Memory Cards/ Flash Drives	6
3.1.7. Radio Frequency Identification	6
3.2. Hardware Maintenance Program	6
3.3. Hardware Monitoring Procedures	6
3.4. Capacity Management	6
4. I.S. Architecture and Software	7

4.1. Operating Systems	8
4.1.1. Software Control Features or Parameters	8
4.1.2. Software Integrity Issues	8
4.1.3. Activity Logging and Reporting Options	8
4.2. Access Control Software	8
4.3. Data Communications Software	8
4.4. Data Management	8
4.4.1. File Organization	8
4.5. Database Management System	8
4.5.1. DBMS Architecture	8
4.5.2. Detailed DBMS Metadata Architecture	8
4.5.3. Data Dictionary/ Directory System	8
4.5.4. Database Structure	8
4.5.5. Database Controls	8
4.6. Tape and Disk Management Systems	8
4.7. Utility Programs	8
4.8. Software Licensing Issues	8
4.9. Digital Rights Management	8
5. I.S. Network Infrastructure	9
5.1. Enterprise Network Architectures	9
5.2. Types of Networks	9
5.3. Network Services	9
5.4. Network Standards and Protocols	9
5.5. O.S.I. Architecture	9
5.6. Application of the O.S.I. Model in Network Architectures	9
5.6.1. Local Area Network	9
5.6.2. Wide Area Network	9
5.6.3. Wireless Networks	9
5.6.4. <i>Ad Hoc</i> Networks	9
5.6.5. Public "Global" Internet Infrastructure	9
5.6.6. Network Administration and Control	9
5.6.7. Applications in a Networked Environment	9
6. Disaster Recovery Planning	11
6.1. Recovery Point Objective and Recovery Time Objective	11
6.2. Recovery Strategies	11
6.3. Recovery Alternatives	11

6.3.1. Contractual Provisions	11
6.3.2. Procuring Alternative Hardware	11
6.3.3. Application Disaster Recovery Methods	11
6.3.4. Data Storage Disaster Recovery Methods	11
6.3.5. Telecommunication Networks Disaster Recovery Methods	11
6.4. Development of Disaster Recovery Plans	11
6.4.1. I.T. D.R.P. Contents	11
6.4.2. I.T. D.R.P. Scenarios	11
6.4.3. Recovery Procedures	11
6.5. Organization and Assignment of Responsibilities	11
6.6. Backup and Restoration	11
6.6.1. Offsite Library Controls	11
6.6.2. Security and Control of Offsite Facilities	11
6.6.3. Media and Documentation Backup	11
6.6.4. Types of Backup Devices and Media	11
6.6.5. Periodic Backup Procedures	11
6.6.6. Frequency of Rotation	11
6.6.7. Types of Media and Documentation Rotated	11
6.6.8. Backup Schemes	11
6.6.9. Method of Rotation	11
6.6.10. Record Keeping for Offsite Storage	11

This is a draft verion.

Executive Summary

2

Information Systems Operations

2.1. Management of I.S. Operations

2.1.1. Control Functions

2.2. I.T. Service Management

2.2.1. Service Level

2.3. Infrastructure Operations

2.3.1. Scheduling

2.3.2. Job Scheduling Software

2.4. Monitoring Use of Resources

2.4.1. Process of Incident Handling

2.4.2. Problem Management

2.4.3. Detection, Documentation, Control, Resolution, and Reporting of Abnormal Conditions

2.5. Support/ Help Desk

2.6. Change Management Process

2.7. Release Management

2.8. Quality Assurance

2.9. Information Security Management

2.10. Media Sanitation

3

Information Systems Hardware

3.1. Computer Hardware Components and Architectures

3.1.1. Processing Components

3.1.2. Input/ Output Components

3.1.3. Types of Computers

3.1.4. Common Enterprise Back-end Devices

3.1.5. Universal Serial Bus

3.1.6. Memory Cards/ Flash Drives

Risks

Security Control

3.1.7. Radio Frequency Identification

RFID Applications

RFID Risks

RFID Security Control

3.2. Hardware Maintenance Program

3.3. Hardware Monitoring Procedures

3.4. Capacity Management

4

I.S. Architecture and Software

4.1. Operating Systems

4.1.1. Software Control Features or Parameters

4.1.2. Software Integrity Issues

4.1.3. Activity Logging and Reporting Options

4.2. Access Control Software

4.3. Data Communications Software

4.4. Data Management

4.4.1. File Organization

4.5. Database Management System

4.5.1. DBMS Architecture

4.5.2. Detailed DBMS Metadata Architecture

4.5.3. Data Dictionary/ Directory System

4.5.4. Database Structure

4.5.5. Database Controls

4.6. Tape and Disk Management Systems

4.7. Utility Programs

4.8. Software Licensing Issues

4.9. Digital Rights Management

I.S. Network Infrastructure

5.1. Enterprise Network Architectures
 5.2. Types of Networks
 5.3. Network Services
 5.4. Network Standards and Protocols
 5.5. O.S.I. Architecture
 5.6. Application of the O.S.I. Model in Network Architectures
 5.6.1. Local Area Network
 L.A.N. Design Fundamentals and Specifications
 Network Physical Media Specifications
 Implementation of W.A.N.s
 L.A.N. Topologies and Protocols
 L.A.N. Media Access Technologies
 L.A.N. Components
 L.A.N. Technology Selection Criteria
 5.6.2. Wide Area Network
 W.A.N. Message Transmission Techniques
 W.A.N. Devices
 W.A.N. Technologies
 5.6.3. Wireless Networks
 Wireless Wide Area Networks
 Wireless Local Area Networks
 Wired Equivalent Privacy and Wi-Fi Protected Access (WPA/
 WPA 2)
 Wireless Personal Area Networks
 5.6.4. Ad Hoc Networks
 Wireless Application Protocol
 5.6.5. Public "Global" Internet Infrastructure
 TCP/IP and its Relation to the OSI Reference Model
 TCP/IP Internet World Wide Web Services
 General Internet Terminology
 Transborder Data Flow
 5.6.6. Network Administration and Control
 Network Performance Metrics
 Network Management Issues
 Network Management Tools
 5.6.7. Applications in a Networked Environment
 Client-Serve Technology
 Middleware

Disaster Recovery Planning

6.1. Recovery Point Objective and Recovery Time Objective

6.2. Recovery Strategies

6.3. Recovery Alternatives

6.3.1. Contractual Provisions

6.3.2. Procuring Alternative Hardware

6.3.3. Application Disaster Recovery Methods

6.3.4. Data Storage Disaster Recovery Methods

6.3.5. Telecommunication Networks Disaster Recovery

Methods

6.4. Development of Disaster Recovery Plans

6.4.1. I.T. D.R.P. Contents

6.4.2. I.T. D.R.P. Scenarios

6.4.3. Recovery Procedures

6.5. Organization and Assignment of Responsibilities

6.6. Backup and Restoration

6.6.1. Offsite Library Controls

6.6.2. Security and Control of Offsite Facilities

6.6.3. Media and Documentation Backup

6.6.4. Types of Backup Devices and Media

6.6.5. Periodic Backup Procedures

6.6.6. Frequency of Rotation

6.6.7. Types of Media and Documentation Rotated

6.6.8. Backup Schemes

Full Backup

Incremental Backup

Differential Backup

6.6.9. Method of Rotation

6.6.10. Record Keeping for Offsite Storage
